HOSPITAL/NURSING HOME MANAGEMENT SYSTEM [H.M.S]

Package details

This package covers all most all the necessary points/records regarding hospital and its management system. The package can be modified as per need of schools. The purpose is to make more transparency between doctor and patient. It is a complete ERP (Enterprise Resource Planner) System for Hospitals. The package can be implemented in three ways. It is GUI (Graphic User Interface) user friendly application. It is fully password protected only administrator can change the necessary details & password.

1. **Standalone Application**
2. **Network Base (complete ERP)**
3. **Module Wise**

1. Standalone Application

This covers all the features but it will work on single machine all the features will be provided in one computer such as Patients details, dingoes, medicines, test reports, ward details etc.

2. Network Base (complete ERP)

This covers all the features with networking i.e. more than one computer. The program/application will be distributed according to department wise, each department can maintain individual records but all data will be stored at one place (i.e. server). Complete information of patients can be retrieved by doctor or the key person at one location on a fingertip.

3. Module Wise

This application can be distributed module wise as per to requirement of hospital. The modules are as follows, utilities will be there in each module

A. **Patients records**
